

Intellectual, IQ and Giftedness Assessment

Adult

A cognitive assessment measures your thinking and reasoning abilities across the core areas of intelligence. It can clarify overall intellectual functioning, identify intellectual disability or giftedness, and help you understand your cognitive strengths and needs.

ASSESSMENT SCHEDULE

- 1 Clinical Interview**
1 hour
- 2 Cognitive Assessment (WAIS-IV)**
2 hours
- 3 Feedback Session**
1 hour for a summary report, 2 hours for a comprehensive report

ASSESSMENT INCLUSIONS

What every assessment includes:

- Clinical interview
- Full assessment administration
- All test equipment and materials
- A feedback session with the clinical psychologist
- A comprehensive psychometric report
- One digital copy of the completed report

REPORT OPTIONS

Summary Report: a concise overview of the findings and results.

Comprehensive Report: a detailed report with full findings and recommendations.

ASSESSMENT FEE

Fees are confirmed in writing before the assessment begins. Please contact our office for further details.

0427 518 774

WHO IT IS FOR

This assessment suits adults who want a clear picture of intellectual ability, whether for concerns about day-to-day functioning or learning, questions of intellectual disability, or identification of giftedness.

TAILORED TO YOU

Every assessment is tailored to you and the reason for referral. The clinical psychologist selects the measures most relevant to your situation and interprets results in the context of your broader functioning.

WHAT WE ASSESS

A cognitive assessment provides an overall intellectual estimate (Full Scale IQ) and considers:

- Verbal comprehension
- Perceptual reasoning
- Working memory
- Processing speed
- Adaptive and everyday functioning

Assessment Measures

The battery is tailored to each person and confirmed at the clinical interview. Depending on presentation and referral question, it may draw on the following.

Wechsler Adult Intelligence Scale, 4th Edition (WAIS-IV)

The leading measure of cognitive ability for adults. It provides an overall estimate of intellectual ability (Full Scale IQ) alongside index scores for verbal comprehension, perceptual reasoning, working memory and processing speed.

Adaptive Behaviour Assessment System, 3rd Edition (ABAS-3)

A standardised rating scale that assesses the practical skills needed for daily living across conceptual, social and practical domains, which is central to identifying intellectual disability.

Additional measures, as clinically indicated

A range of further standardised tools selected according to your needs and the referral question.

THE REPORT

A comprehensive report outlining the assessment findings, the results and their meaning, and practical recommendations to support you day to day.

FEEDBACK SESSION

A dedicated feedback session with the clinical psychologist to walk through the findings, answer your questions, and discuss recommendations in detail.

WHY CHOOSE US

- Experienced clinical psychologist
- Rigorous, evidence-based assessment
- Tailored to your needs
- Respectful, person-centred approach

NEXT STEP

If you would like a clear picture of your intellectual ability, please phone or email our office to discuss your needs and booking options.
